API Testing Report

JSONPlaceholder Users API Validation

Case Study:

Validation of the **/users** endpoint using GET, POST, PUT and DELETE requests with automated Postman tests.

Date: June 2026

Environment: JSONPlaceholder API | Postman | Desktop | Windows

Type: API Functional Testing | Response Validation | Postman Automated Tests

Project Overview

This project demonstrates API testing using Postman on the JSONPlaceholder REST API.

API: <https://jsonplaceholder.typicode.com/users>

Tool: Postman

Methodology: Functional API Testing

Endpoints Tested

A. GET /users

Test Cases Executed

- ✓ Status Code is 200
- ✓ Response Time is less than 1000 ms
- ✓ Content-Type is application/json
- ✓ API returns 10 users
- ✓ All users have email
- ✓ All users have phone
- ✓ All users have website
- ✓ All emails contain "@"
- ✓ All user IDs are unique
- ✓ All IDs are greater than zero
- ✓ All users have city
- ✓ All users have zipcode
- ✓ All users have geo coordinates
- ✓ Result: PASS

B. POST /users

Test Cases Executed

- ✓ Status Code is 201
- ✓ Response contains ID
- ✓ Returned name matches request
- ✓ Returned email matches request
- ✓ Result: PASS

C. PUT /users/1

Test Cases Executed

- ✓ Status Code is 200
- ✓ User name updated successfully
- ✓ User ID equals 1
- ✓ Email returned correctly
- ✓ Result: PASS

D. DELETE /users/1

Test Cases Executed

- ✓ Status Code is 200
- ✓ Response body is empty
- ✓ Result: PASS

E. Conclusion

All API requests behaved as expected.

The GET endpoint returned valid user data.

The POST endpoint successfully created a new user.

The PUT endpoint successfully updated the selected user.

The DELETE endpoint successfully removed the resource.

All automated assertions passed successfully in Postman.
